DETAILED ACTION

Information Disclosure Statement

1. All references of record in parent application 10/044,003 have been considered. However, as applicant has failed to list the patents on a FORM PTO-1449, they will not be printed on the face of any patent issuing from this application. Should applicant wish these references to be printed, a FORM PTO-1449 listing those patents should be provided.

Claim Objections

2. The claim objected to because of the following informalities:

The terms "dispensing fluid", "mixing fluid", and "internal fluid flow path" lack strict antecedent basis in the specification.

In lines 2 and 3, "a dispensing fluid" and "a mixing fluid" are the same fluids as recited in the preamble as "a first and second fluid". The claim format would benefit from consistent terminology therein and with the specification.

Appropriate correction is recommended.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground

Art Unit: 3754

provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. The claim rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,712,242. Although the conflicting claims are not identical, they are not patentably distinct from each other because the differences in terminology from first and second fluid to dispensing and mixing fluid along with the change in terminology from dispensing fluid flow path to internal fluid flow path describe the same structures in the same scope as in claim 1 of U.S. Patent No. 6,712,242. The remaining claim differences within the body of the claims are a result of the pending application claim being broader in scope and fully anticipated by the narrower patent claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. The claim is rejected under 35 U.S.C. 102(b) as being anticipated by Charland (4,311,160).

Art Unit: 3754

In figure 1, Charland teaches of an apparatus for mixing a first and second fluid having a first flow path (20), second flow path (16), valve (11), a mixer (22), plunger (13).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Friedman is included because it is the patent issuing from the parent application.
